Database API Generator™ for Datacom® & IDMS™ Databases

Enable application developers with the ability to quickly and easily create REST APIs that access native data and business logic to build modern web-based user experiences.

What can the Database API Generator do?

- Auto generation of APIs, requiring little or no knowledge of the underlying database
- Increase user productivity resulting in faster time-to-market deliverables
- Support application maintainability and growth for Datacom and IDMS databases

How much does the Database API Generator cost?

No additional charge for licensed Datacom/DB 15.1, Datacom/AD 15.1, and IDMS 19.0 customers

Why APIs?

Enables database extensibility, promoting simplification and automation of everyday user experiences supporting each customer's unique project needs.

Allow developers to use modern languages and frameworks to create new user interfaces and applications that leverage and enhance existing investments in IDMS and Datacom.

Getting started today:

- **Download** the Database API Generator for **IDMS** or for **Datacom** in the Support Center (login required).
- Participate in a no-charge **Embrace Open Workshop** to onboard you through installation and demonstrations

30 Minutes

Build a customized REST API in minutes. Choose which tables and data to access.

Little or no coding

API development & delivery accelerated by **80%** with limited knowledge of IDMS or Datacom.

z/OS Security

Mainframe security credentials required. Integration with Zowe can provide enhanced security and scalability.

"Embrace Open allows organization to extend mainframe value further into the enterprise, simplifying usage through modern tooling to manage critical systems and facilitate user-developed interfaces and dashboards. Our goals include leveraging the strength of IDMS & Datacom, providing you with the ability to benefit from modern accesses to your existing investments and promote avenues for deeper integration and opportunity for new application growth."
